

Subitec GmbH

POINT (9.1673716 48.738084)

Subitec addresses dynamic growth markets with high valuable substances for the cosmetics and food supplement industry. Cooperations with renowned energy companies are door openers for the worldwide expanding energy market. But this outlines only the beginning of a broad basis of applications of Subitec's technology.

Focus of our business activity is, on one side, the marketing of the technology platform. On the other side process development and delivery of entire turnkey ready plant right up to complex biomass-refineries are our expertise. Beyond that, commissioned production of algal biomass is offered additionally.

The development of specific, salable algal products resulting from up- and downstream processes do not represent the core competence of Subitec.
